

Information Builders is one of the largest independent software companies in the world. We work with over 12,000 customers to ensure their success by putting interactive and actionable information in the hands of everyone in the extended enterprise: employees, partners, suppliers, and customers.

Enterprise Best Practices

Implementation Services Package

Information Builders' Enterprise Best Practices Implementation Services Package enables you to plan and implement the technical infrastructure that will best support your business intelligence and integration efforts toward your business objectives today and in the future. This comprehensive package provides organizations that implement WebFOCUS and iWay Software technologies with a best-practices plan based on what Information Builders has learned during multiple enterprise implementation experiences. The plan provides effective direction for both the initial deployment and ongoing maintenance and expansion of applications and systems.

The package includes everything you need to ensure that your organization will be able to proactively plan for and meet its stated objectives on time and within budget. It will help you implement solutions while mitigating project risk and ensuring rapid end-user adoption. Our senior consultants will provide specific direction based on your business objectives within the context of your existing and future technical infrastructure. The plan includes a road map and methodology that will support the implementation of current as well as future applications.

Process

Phase One: Business Objectives Review

In the first phase, we'll conduct a review of your organization's business objectives with an eye toward how they figure in your deployment of Information Builders' WebFOCUS and iWay technologies.

Phase Two: Architectural and Implementation Framework

In phase two, we'll translate those business objectives into an architectural and implementation framework that incorporates:

- An appropriate WebFOCUS and iWay configuration – including development, testing, quality assurance, and production environments
- Security integration – with your security software, protocols, and standards
- Operational support recommendations – for staff-skills development (training), operational support, and the establishment of a Competency Center

Find Out More

To learn more about how the Enterprise Best Practices Implementation Services Package or other Information Builders' Consulting services can help your company succeed, visit our Web site at www.informationbuilders.com/consulting/index.html, or in the U.S. and Canada, call **(800) 969- INFO**.

- Maintenance and performance-level recommendations – for ongoing maintenance and assurance that you can perform and meet the requirements of your service-level agreements
- Hardware and network recommendations – for initial and future application deployment, as a function of application and user-population profiles

Deliverables

Once we have completed the architectural and implementation framework research, we will provide you with five documents designed to prepare your organization to successfully implement both immediate and future WebFOCUS and iWay Software applications as you gear up to the enterprise-wide use of our technologies:

- Installation and configuration plan
- Implementation topology document
- Security strategy document
- Application development guidelines – based on the framework analysis and on best practices methodologies
- Education and staff training schedule – outlining applicable Information Builders education classes and external training
