

Information Builders is one of the largest independent software companies in the world. We work with over 11,000 customers to ensure their success by putting interactive and actionable information in the hands of everyone in the extended enterprise: employees, partners, suppliers, and customers.

With WebFOCUS Open Portal Services, you can quickly and cost-effectively offer real-time data from anywhere in the enterprise to anyone using the WebSphere Portal.

WebFOCUS

Open Portal Services

for IBM WebSphere Portal

Delivering Real-Time Information Anywhere, Anytime, to Anyone

IBM's WebSphere, today's Web technology of choice, depends on the currency and quality of the information it supplies and transmits. Information Builders' WebFOCUS integrates fully with WebSphere's portal and application server solutions to deliver consistent, accurate real-time information on a broad scale throughout the enterprise at a low per-user cost.

WebFOCUS Open Portal Services for WebSphere

WebFOCUS Open Portal Services for IBM WebSphere Portal enables customers to quickly add business intelligence content to their portal initiatives without any need for additional programming. Administration have the ability to:

- Personalize the way users view, store, and retrieve business intelligence content for optimum job efficiency
- Decide what content users will have appear in each content window, how that content is displayed, and how it is organized – even combining graphics and reports on the same page
- Manage documents for users and enable users to perform content searches
- Extend additional privileges to users, allowing them to perform all types of reporting and queries, including ad hoc, OLAP, scheduling, or mobile capability
- Give users the ability to select a report, run it, and direct the output
- Let users work in a secure, role-based, managed environment

Security

WebFOCUS Open Portal Services supports internal and external security for delivering real-time business intelligence reports to authorized users within the WebSphere Portal Experience environment.

Administrators can structure and assign reports to individuals based upon the department they work in, and can assign even greater levels of security by granting

access to reports based upon their role in the organization. Departmental security allows users to see only reports for the department to which they have access, such as accounting, finance, or sales. Role-based security allows individuals to view reports based upon their particular role within the organization, for example the CEO or VP who needs to access information across various departments throughout the enterprise.

WebFOCUS Services for Java™ Environments

Known for its superior scalability, WebFOCUS takes advantage of the Java-based WebSphere Application Server to deploy more applications to more people using the same hardware and software at a lower per-user cost. WebFOCUS Services for Java Environments provides a stable, robust business intelligence platform for supplying rich, data-based content to the WebSphere Application Server.

WebFOCUS Services for Java Environments plugs WebFOCUS right into WebSphere Application Server's architecture.

Features

- On-server deployment of business intelligence applications – for more efficient request processing.
- Flexible single or multiple server deployment options – so you can easily scale to support any number of users.
- Leverages WebSphere's load balancing and pooling capabilities – to realize efficiencies of scale as applications are deployed across heterogeneous networks.
- Adheres to all Java 2 standard architecture guidelines – for more robust performance and support, maximized developer skill sets, and immediate compatibility and deployment.
- Native access to more than 85 data sources – for immediate information delivery that leverages your existing infrastructure and rapidly integrates all sources within a portable, scalable architecture.
- Scheduled, event-driven, on-demand information delivery – so decision-makers can address business issues with the formats they use every day – e-mail, Web pages, Excel, wireless devices, and printable PDF files.
- Security support at all levels, internal and external – to ensure the integrity, reliability, and business continuity of data and systems.
