

Information Builders' WebFOCUS business intelligence and iWay Software integration technologies provide an end-to-end information management strategy, combining performance management, data governance, business intelligence, and analytics to help organizations make smarter decisions.

iWay Data Profiler

Sophisticated Profiling for all Organizational Data

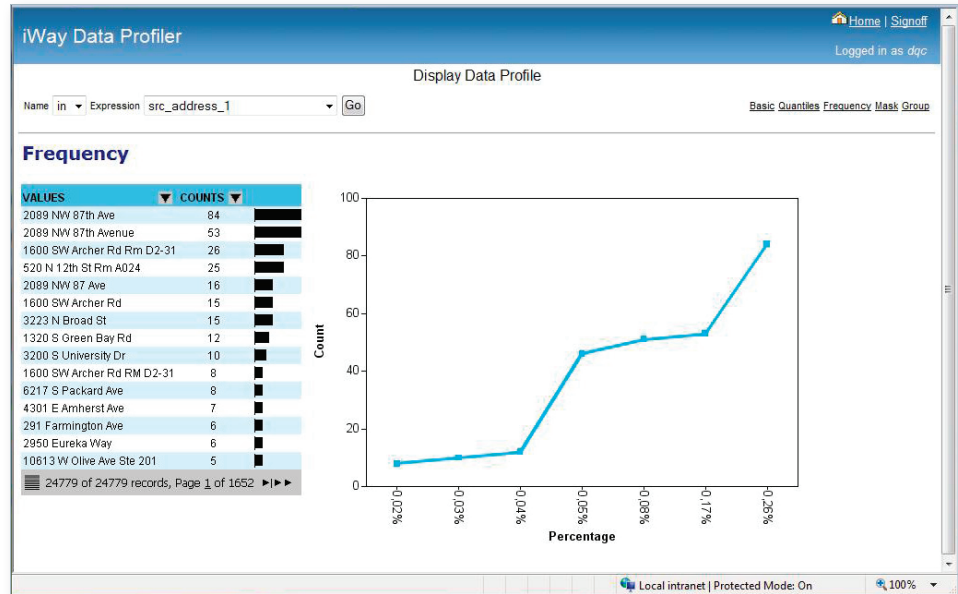

The iWay Data Profiler integrates output from iWay Software's Data Quality Center (iWay DQC) with business intelligence (BI) technology in a simple yet powerful way by enabling administrators to view, monitor, compare, and report on the mission-critical data of any organization. It provides sophisticated integration capabilities bolstered by mature tools for data quality monitoring, reporting, and analytics.

iWay Data Profiler enables users to query, report, analyze, deliver, and display electronic profiling data in any way they choose. iWay DQC's capabilities for semantic analysis and the application of complex business rules can generate advanced data profiling information. This profiling functionality is able to determine basic data statistics, uniqueness, frequency, and masks as well as define custom business rules. Its relationship analyses includes primary and foreign key.

iWay Data Profiler takes the data profiling information provided by iWay DQC even further by enabling information archiving for on-demand reporting as well as additional graphical and intuitive analysis of the variance in data profiles over different time periods. Drill-down data can also be collected in a database so the exact records that fall into one of the profiled categories can be displayed.

To find out how our solutions can help your company succeed, talk to an Information Builders representative today. Contact your local Information Builders office, visit us at informationbuilders.com, or in the U.S. and Canada, call (800) 969-4636.

With iWay Data Profiler, administrators can perform the following functions:

- Collect profiling data from iWay DQC
- Tag and archive profiling data input as a set into an associated RDBMS for easy retrieval
- View the data profiling set using advanced data manipulation and graphics
- Compare multiple archived data profiling sets to view the variance in profiling data
- Print/export any of these views in industry-standard formats like HTML, PDF, and Excel
- Share data with other users across the intranet/Internet

A browser-driven, thin-client solution, iWay Data Profiler gives organizations the ability to extend powerful data profiling capabilities to anyone who needs them without any additional client software, plug-ins, or report viewers.
