

Information Builders' WebFOCUS business intelligence and iWay Software integration technologies provide an end-to-end information management strategy, combining performance management, data governance, business intelligence, and analytics to help organizations make smarter decisions.

WebFOCUS Open Portal Services enables Microsoft SharePoint Portal Server users to display, locate, share, collaborate, visualize, and analyze business intelligence information based on their roles within the enterprise.

WebFOCUS Open Portal Services for the Microsoft® SharePoint™ Portal Server

Deliver Secure, Real-Time, Rich BI to Portal Customers

WebFOCUS Open Portal Services for the Microsoft® SharePoint™ Portal Server enables companies to quickly integrate real-time business intelligence (BI) content and deliver it to Microsoft SharePoint Portal Server users without any additional programming – effectively increasing the value of any Microsoft SharePoint Portal Server deployment.

Features

With WebFOCUS Open Portal Services you can deliver business intelligence capabilities to Microsoft SharePoint Portal Server users quickly and easily by:

- Personalizing the way users view, store, and retrieve business intelligence content for optimum job efficiency
- Deciding what content users will have appear in each content window, how that content is displayed and organized, and even combine graphics and reports on the same page
- Managing documents for users and enabling users to perform content searches
- Extending additional privileges to users, allowing them to perform all types of reporting and queries, including ad hoc, OLAP, scheduling, or mobile capability

Find Out More

- Giving users the ability to select a report, run it, and direct the output
- Letting users work in a secure, role-based, managed environment

Security

WebFOCUS Open Portal Services supports internal and external levels of security. It tightly integrates external security with reports and provides authorized SharePoint users with access to information based on their department or role within the organization. Departmental security allows users to see only the reports for the department to which they have access, such as accounting, finance, or sales. Role-based security allows individuals to view reports based on their position within the organization – CEOs or VPs have access to information across various departments throughout the enterprise.

For more information about WebFOCUS support for internal and external security, visit informationbuilders.com/products/webfocus/security.html.

Benefits

Organizations that integrate WebFOCUS Open Portal Services' with the Microsoft SharePoint Portal Server can deliver integrated, flexible, secure, role-based business intelligence capabilities to their employees, partners, and customers. Users gain personalized access to information that helps meet their individual requirements and skill levels.
