Everything Should
Work Together

iWay Software Integrates the Extended Enterprise

iWay Software is a leading provider of robust, cutting-edge integration solutions that empower businesses to fully leverage their existing technology assets to successfully achieve new goals and meet new challenges – rapidly and cost-effectively.

Our approach to integration is simple, but unique. We provide a single, fully integrated set of graphical design tools and a portfolio of reusable pre-built components that eliminate the need for cumbersome and expansive manual coding. These tools serve as the foundation for a powerful, enterprise-class infrastructure that integrates, validates, and streamlines critical business processes and related information. They include solutions for:

- Internal business applications and databases
- Data warehouses and marts
- External systems and exchanges
- Inter- and intra-company transactions and processes
- Messages, documents, and other unstructured business content

iWay's comprehensive portfolio of offerings also includes:

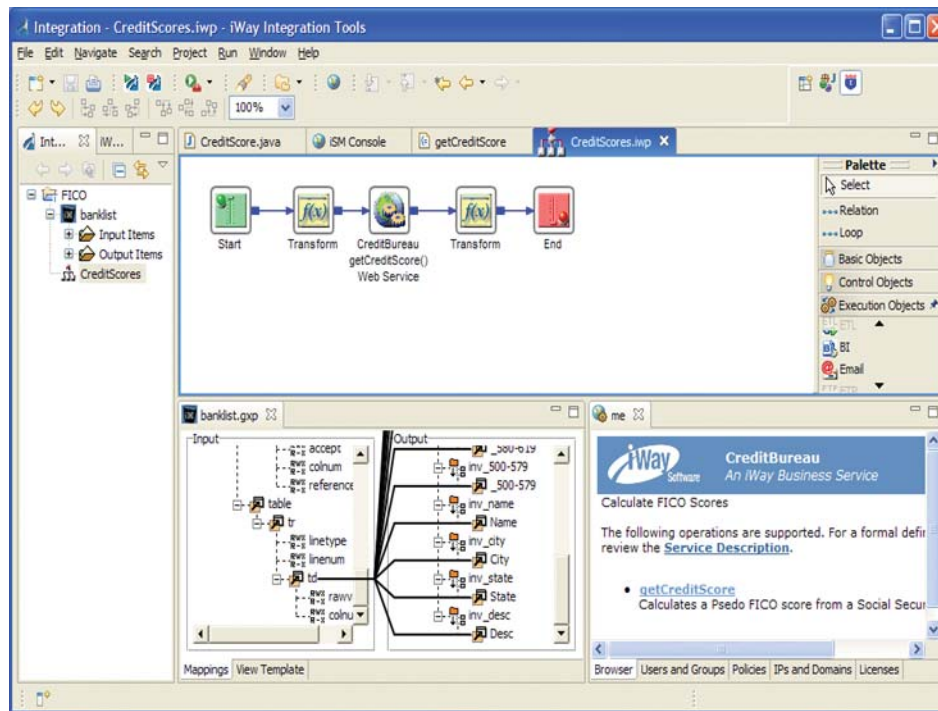

- Comprehensive suites that support mission-critical integration initiatives such as business process automation (BPA), business-to-business (B2B), and enterprise information management (EIM)
- A powerful ESB integration server – complete with real-time activity monitoring and governance – that enables rapid integration assembly from pre-built components. This accelerates return on investment (ROI) and reduces total cost of ownership (TCO) by maximizing reusability, and eliminating the need to write custom integration code
- A patented suite of adapters that can seamlessly connect more than 300 data sources and information assets within or beyond the enterprise
- The ability to deploy and run on all Java EE-compliant (J2EE) application servers including IBM WebSphere, Oracle WebLogic, SAP Netweaver, Red Hat JBoss, and Apache Tomcat

All iWay Software solutions are truly vendor, platform, and protocol agnostic. They can consume virtually any data, regardless of its location (including information contained in ERP, CRM, and other applications), legacy systems, files, messages, documents, and other unstructured business content. Additionally, iWay solutions deploy to all major hardware or application server platforms and provide full support for all key technology and business standards.

Business Process Automation

The iWay Business Process Automation suite is a robust platform that automates key processes across the enterprise. This state-of-the-art solution improves operational efficiency and profitability by streamlining, coordinating, and accelerating core business activities. At the same time, it eliminates the risks associated with piecing together BPA solutions using multiple tools from different vendors. As a result, businesses can:

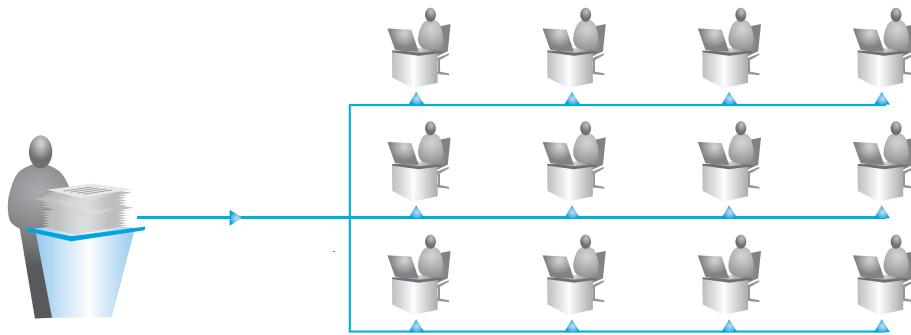

- Automate mission-critical processes – even highly sophisticated or complex workflows – from start to finish

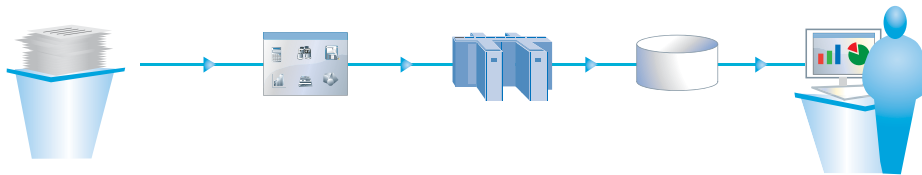

- Achieve complete visibility into vital activities by monitoring them in real time
- Enable fast, secure messaging across and beyond the enterprise
- Transform any existing application, legacy database, or transaction into fully reusable services, for rapid process composition
- Share processes with suppliers, customers, and other business partners through integrated business-to-business capabilities
- Adhere to all key standards including BPPEL, BPPEL4People, WS-I, and WS-Human Task

The iWay BPA suite is built on a single, powerful foundation made up of our market-leading Universal Adapter Framework and our cutting-edge integration server, Service Manager. This provides a fast and flexible environment that fully protects current investments by easily scaling to support future integration initiatives.

Without iWay Software

With iWay Software

Companies can dramatically improve the way they conduct transactions with their suppliers, customers, and other partners, as well as those that span external exchanges, with the iWay Business-to-Business suite. This robust, flexible B2B and managed file transfer (MFT) gateway is open, flexible, and highly secure, providing full support for all types of B2B and MFT transactions, or any type of event (low- and medium-latency activities, full transactions, portions of transactions, event-driven batches, callable or scheduled events, etc.), with complete adherence to ebXML, AS1, AS2, AS3, SOAP, REST, and other important standards.

The screenshot displays the iWay B2B suite interface. It features a main 'Edit partner' form, a 'Partner Systems' table, a 'Partner' list, and a 'Contacts' table for the selected partner.

Additionally, the iWay B2B suite provides:

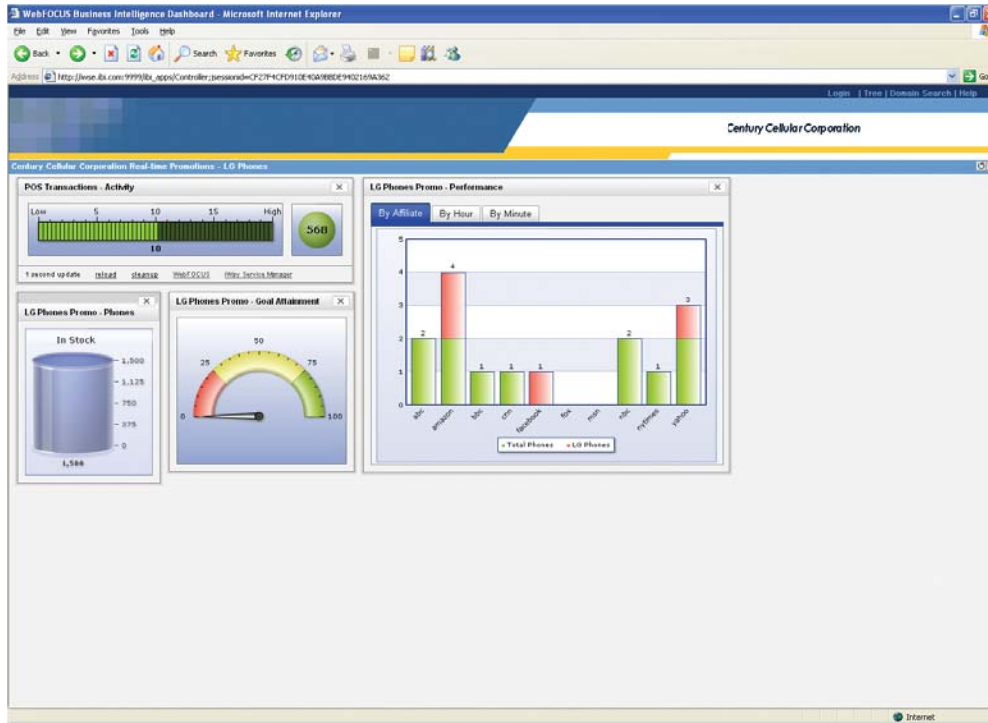

- Fully integrated business process automation to coordinate and accelerate core activities across internal and external stakeholders
- An intuitive, Web-based graphical user interface that empowers trading partners with unhindered self-service access to the timely information they need
- A rich portfolio of adapters for B2B and B2B2A, extending B2B and MFT to any internal system
- End-to-end monitoring and reporting of all business activities, including conversations, agreements, and transactions, to enhance governance and efficiency by providing unhindered visibility into all partners and related events

- Industry-specific solutions to address the unique integration needs of companies in healthcare, financial services, insurance, consumer packaged goods, manufacturing, and retail
- The highest reliability, stability, and performance – at all times

The iWay B2B suite is comprised of our patented Universal Adapter Framework, and our cutting-edge integration server, Service Manager. This significantly increases the speed, reach, and efficiency of B2B integration, while providing a solid and scalable, yet cost-effective framework for other important initiatives down the road.

Real-time management of information from anywhere across your entire enterprise is easy and cost-effective with the iWay enterprise information management suite. Regardless of where your data resides, whether it's structured or unstructured, the iWay EIM suite can seamlessly integrate it and enhance its quality.

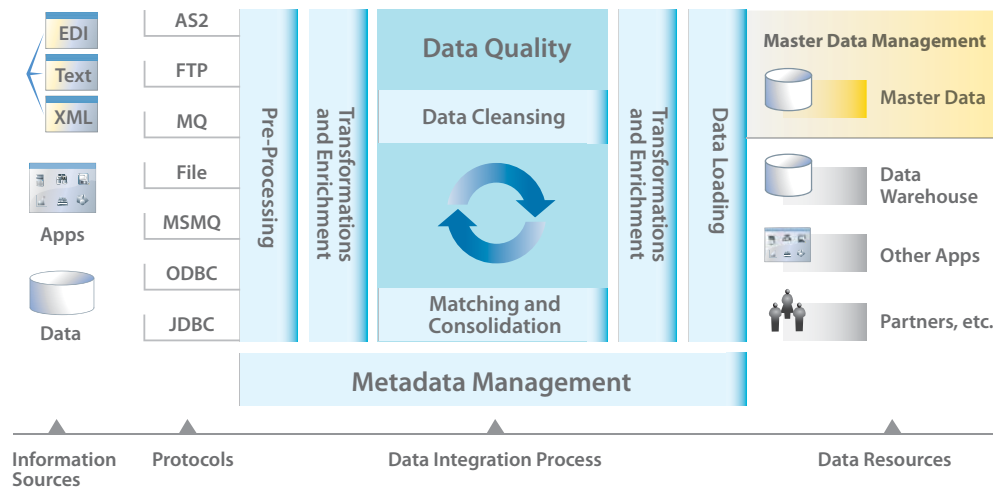

The iWay EIM suite provides:

- Unparalleled data integration and quality management via batch or real-time methods
- Direct access to both structured and unstructured content from any source
- Real-time monitoring, reporting, and delivery of information from across the organization, through intuitive Web-based dashboards
- Seamless integration with business intelligence environments
- Comprehensive data-quality services that validate, cleanse, identify, match, and enrich all enterprise information to ensure optimum accuracy, timeliness, and reliability
- End-to-end management of all metadata and master data
- Speed and scalability that allows the EIM suite to retrieve, transform, and move millions of records in only a few minutes – and real-time information is accessed in just milliseconds

- Integrated, advanced extract, transform, and load (ETL) capabilities, including dynamic capture of events and changed data
- Full search engine support that allows business events and data extracts to be automatically enriched and fed to any enterprise search engine
- Support for low- and medium-latency events, as well as transactions and batch-oriented integration

Built on iWay's Service Manager, the iWay EIM suite seamlessly links any and all information assets, while providing facilities for improved data quality and the complete management of metadata. The result? An environment that supports even the most sophisticated enterprise information management strategies, while offering the extensibility needed to support future endeavors.

Enterprise Information Management

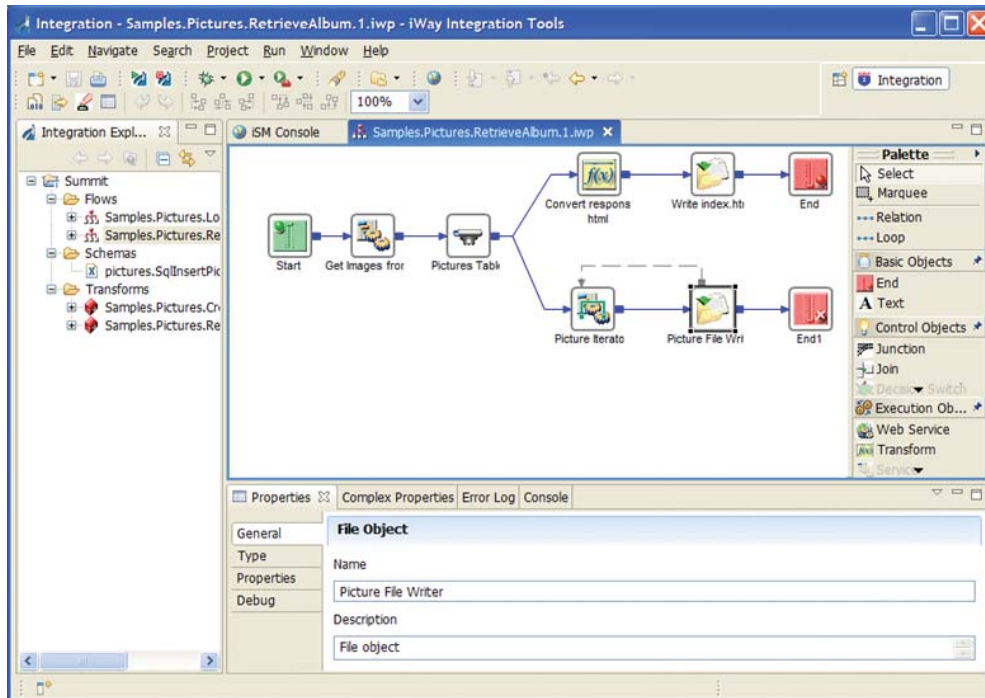

A Flexible, Scalable Integration Foundation

All iWay suites and solutions are built on a robust foundation that maximizes business agility by delivering fast, cost-efficient enterprise-class integration throughout the organization. With an iWay infrastructure in place, companies of all types and sizes can unleash the full potential of their existing technology investments by facilitating unhindered interoperability across all data, applications, systems, and environments.

iWay's comprehensive integration foundation is comprised of the iWay Integration Server and the iWay Universal Adapter Suite:

The iWay Integration Server

This secure, high-performance enterprise service bus (ESB) server provides a broad array of tools that enable the rapid assembly of both simple and sophisticated integrations, including A2A and B2B, from pre-built components. No complex code to write, no custom solutions to maintain. Just powerful and seamless integration that effectively serves as the backbone of any service-oriented or event-driven architecture (SOA and EDA). So, organizations can leverage their technology assets to achieve their most important goals while realizing accelerated ROI, and the lowest possible TCO.

The iWay integration server offers:

- **Unlimited deployment options.** Deploy to any major hardware platform, including zOS and iSeries, as well as any mega-vendor server platform such as WebSphere or NetWeaver
- **Reduced cost and risk.** Combine faster time-to-implementation with true reusability to minimize the expense and risk associated with integration
- **Fully integrated activity monitoring and governance.** Provide complete visibility by allowing administrators to view, track, and report on any integration process and ensure quality and compliance at all times
- **An intuitive graphical interface.** Simplify skill set needed to design, deploy, and maintain integration projects

The iWay Universal Adapter Suite

Our Universal Adapter Suite is a patented, market-leading portfolio of pre-packaged adapters that quickly and seamlessly connect virtually any set of information assets. It also eliminates the need for hand coding and shields developers from the complexities that exist in both out-of-the-box solutions and proprietary systems.

iWay adapters can rapidly and economically bring together:

- Packaged applications such as ERP, CRM, help desk, sales force automation, and other systems
- Mainframe and legacy data, applications, and transactions
- Data warehouses, data marts, and operational data stores
- Content management systems such as Documentum, Hummingbird, and Livelink
- Unstructured content such as documents, files, and e-mail messages
- Messages and transactions, including EDI formats, HL7, SWIFT, FIX, and ACORD

iWay Universal Adapter Capabilities:

- Full support for both SOA/WOA and ESB style deployments, including SOAP/HTTP, SOAP/JMS, REST/HTTP, MQ, Tibco, JMS, .Net, MSMQ, WCF, and more
- Deploy to WebSphere, WebLogic, NetWeaver, Oracle Fusion, JBOSS, Apache, and other common J2EE servers
- Link to any other business process platform, such as WebSphere Process Server, WebSphere ESB, WebSphere Message Broker, BizTalk Server, NetWeaver Process Integration, Oracle BPEL Process Manager or ESB, etc.
- Create fully-reusable interfaces across all supported standards, platforms, and technologies

Pre-Built Components

iWay Software empowers companies to build B2B, B2A, and B2B2A integration scenarios in the fastest and most economical way possible by providing a wide array of pre-built integration components. These robust components enable rapid, intuitive integration assembly via a set of user-friendly graphical design tools, and allow for quick deployment to a run-time execution engine on any standalone environment supporting JVM, or any Web application server.

Our pre-built components are designed to simplify and accelerate:

- Service enablement across diverse and multi-faceted technology environments
- Message and event processing, transformation, and routing
- Data integration and extract, transform, and load (ETL)
- Business integration, auditing, and messaging
- Information governance and quality management
- Real-time activity monitoring

Find Out More

It's no secret that agility is the key to achieving and maintaining a competitive edge. iWay Software provides organizations of all types and sizes with the kind of powerful, yet flexible infrastructure they need to react to dynamic market conditions, adjust to shifting business environments and models, and respond to changing customer demands.

Our industry-leading products and services are proven to efficiently transform business operations by integrating existing data, applications, and environments with new systems and applications – reducing costs, improving productivity, and protecting existing technology assets from obsolescence.

Learn how iWay Software can position your company for maximum competitive advantage, while helping you realize optimum return on your technology investments. Visit our Web site at iwaysoftware.com or call **(866) 297-4929** for more information.
